BANK O F BACHELORS

Name:- Arshanali Ahmedali Rangrez

Mentor Name:- Vrushali Pande Mam

Project Summary:-

This project is based on C language. This is a Bank Management System project.

This is a menu driven program. It allows user to add numbers of account and store money and also depositing and withdrawing amount is avaible.

A user has to enter account number,owner name and starting amount to create their accounts. User can also check the balance of amount he or her has in his account by just entering the right account number.

The name “bank of bachelors” is selected because I think that current generation of bachelors does not have much amount to save in their accounts. As the real world banks keep a condition of keeping some amount of money in their account or else they will have to pay penalty. So here in bank of bachelors the account owner does not necessarily has to keep money in the account , he or she can open and keep their account empty called zero balance account.

Concepts of C used in project:-

- Structure
- For loop
- Switch case
- Do While Loop
- Printf statement
- Scanf statement

Problems or Errors during the project creation:-

1.First I declared variable n after declaring struct, through which it was giving a garbage value.

Solution:- Declaring variable n before declaring struct.

2.I got a problem in the execution of program like whenever I select an option to perform operation so after performing that operation the program is end and exit .

Solution:-Keeping the switch case block inside a do while loop and adding a option to select exit operation to end the program.

AI tools used :-

Chatgpt:-

I used chatgpt to help me guide at the automatically program ending problem. Chatgpt suggested me to add do while loop in the program.

THANK YOU
